

Abib Report 2014

March 27, 2014

Hi Folks;

Here you will find several pictures Pierre took for us today. He sent a lot of them. They are in areas in the North Eastern Negev just before the start of the Judean foothills. These are the transition zones from completely fertile fields, to some with stone and some very fertile, and then stone. I have included several so you can see the transitioning taking place so there is no mistake as to the quality of the fields. These locations are typically the early harvest areas as many of you know from years of scouring reports and such. There are 24 days left until an April wavesheaf would be offered. Everything is right on schedule. These pictures are representative of the Negev region as to the age of the crops. I think it goes without saying that the domestic are usually more advanced than the acceptable locations of wild/volunteer barley. Pierre has taken the time from his responsibilities to provide us with these pictures. I had asked him to do so for there are some brethren who have asked for this evidence with all the misinformation circulating around these days. Thank you Pierre!

Picture number one typifies the general region north of Beersheva. All the domestic barley and wheat are at the same maturity level for they were all basically planted at the same time.

The second picture is a representative kernel of the domestic grain. We are utilizing it for it clearly shows the stage of growth of the grain crops. Notice the plumpness of the kernel. Notice the greenness of the kernel. Notice the amount of moisture in the kernel where it is split. This kernel would shrivel under the heat of roasting it. At least 7-10 days away to be sure it would not.

Picture number three is a location further north and on the footsteps of the Judean Hills. The field at the back is domestic barley, the field with some stone in it which is not used domestically has volunteer barley, weeds, and darnel (Rye Grass) growing in it. Nothing is aviv! Notice the early arrivals standing in the field. The stork migration has just started.

Dear brethren everything is right on time. No hocus pocus and no showmanship required. I hope this can be of assistance to you in the sea of Satanic confusion. Please do not let anyone judge you in the convictions of your heart as you approach the upcoming Passover. Regardless of your reckoning of the crescent, most if not all of you, have the wavesheaf in common. That is our foremost focus at this time of year for that is what triggers all the other important dates in our Creators calendar counts.

Brian

March 26, 2014

Hi Folks, Some of you have sent us a report from NG that he has found aviv upon his return to Israel. There are several things we should all be learning from this recent episode of the Satanic Broadcasting Network. I use that term because Satan is the prince of the power of the air, as scripture tells us and warns us. Our human spirit or the spirit in man as Paul puts it, is a receptor or receiver for his broadcasts. We have been given another spirit by God/Elohim which when used discerns between the

knowledge of God/Elohim and that of man guided by Satan. I suggest you scroll down to the December 20th post below. In it we forewarned about people using the goat grass of Ein Mabu'a and the grazing regions of the Jordan Valley to declare a false aviv. We can't read another's mind but we can certainly observe a pattern of behavior and here we are seeing one being followed to a tee.

Please use the spirit you have been given and the understanding you have acquired over the years. Take a look at the pictures offered as evidence. The one with a large stone in the center is offered as evidence one. Enlarge the photo on your computer screen. What do you see? Goat grass barley which is not aviv. Now why do I call it goat grass? Look at all the surroundings. That is not agricultural ground but an area used for grazing sheep and goats. Look at the composition of the soil. I know exactly where that location is. The report states it is just south of Beth Shaun. In relative terms that is saying Antarctica is just south of Australia.

Look at the two pictures of close up goat grass. It is completely anemic growing in stony ground with tiny little stalks and shriveled little heads. The idea of the close up is to make it look bigger than it is. This barley is probably from Ein Mabu'a. If you search our records you will see why it is unacceptable for any offering period. You will also see pictures which show you the terrain.

Yes the old saying that the devil is in the details can be cried out here. Several scriptures come to mind when I read this recent report. 1 Kings 18:21; "How long will you falter between two opinions? If Yehovah is God/Elohim, follow Him, but if Baal, then follow him."

We are witnessing a businessman spreading manure on his field so that it will yield more for him. I don't think that needs any more explanation. Satan is very active this year in an attempt to confuse brethren as to the upcoming Passover and days of UB. Think about the timing of this report. It is being done to spread doubt. It will continue right up to the sighting of the new moon as well, so hold onto your horses as the saying goes. Also hold onto your money!

When Paul was addressing the Corinthian brethren, just prior to his correcting them on how some were actually keeping Passover according to the circumcision party he made the following statement. 1 Corinthians 11:19, "For there must be factions among you, that those who are approved may be recognized (made evident/manifest) among you." Please do not be easily or soon shaken. We attempted to warn everyone to such an event as this in December 20, 2013 for this upcoming biblical year.

March 14, 2014 Update;

Hi Folks; People have been asking if there has been any significant change in the maturity level of the barley in Israel. I do believe they are asking since some of the brethren are using this month as the first month of the year and they are having reservations since Passover for them is knocking at the door. The answer to the questions is; no there has not. This past week has had some real swings in temperatures in Israel along with needed rain and in some locations too much too quick and has resulted in flash flooding in those locations. Many of you follow the Israel Meteorological Service (IMS) website postings. Being the official weather folks for Israel they are very valuable to us with a wealth of past and present information. For instance as I write the temperature in Jerusalem is 43F or 7C. That is cold. Remember this is where the Passover and UB would have been kept in times gone by. The forecast for tonight and tomorrow is 39F/55F with a chance of rain in Jerusalem. There is to be a warm up and then a significant drop in Temperatures on Tuesday again.

We all have to seek out our own salvation with fear and trembling but dear brethren it is still winter in Israel based on all the signs. The only reason I am writing this is because many are asking what the current conditions are. That means there are a lot more who are thinking the same thing who have not asked, at least from us. I hope this can be of assistance to you.

Brian

Sunday March 2, 2014

Hi Folks,

Today we got a real early start into the Jerusalem area. The city is going to be shut down this afternoon for protests so traffic was very light for a work day.

Once again the barley was very young. On the hillsides facing the sun some of the barley was in the head and flowering. Of course this greenhouse effect has that result when surrounded with all the roads and stone walls etc. Most was still in the boot even under those conditions. Fig trees were dormant.

Heavy cloud cover is setting in with some rain starting in Shores. We will look for the crescent before leaving for the airport, hopefully things will clear up.

If I may be so bold to ask those of you who are reading this report for prayers as to the start of the new year next month. There is the possibility that the Abib Calendar and the Rabbinic Calendar may begin on the same day. This could be a big blessing for

those who are in families with members who function under different calendar. Of course the caveat is; may Gods/Elohims will be done.

Friday February 28, 2014

Hi Folks,

Greetings from Israel. We got out early this morning and made a fast trip through our traditional areas in the North. Our stops supported what we found yesterday in the Negev. The barley is very, very, young. We struggled to get a good picture in our locations with the heads emerged. The picture which is attached is from the Sdei Trumot location just south of the 667 and 90 junction. Most of the barley inspected was in the boot looking like grass.

We did not see any storks, which was to be expected being so early. However we did witness large numbers of buzzards today as yesterday. They are always earlier than the storks.

I have included a shot of Mt. Hermon with its snowy slopes.

We will be out Sunday in the Jerusalem area but that is expected to be even younger than the other two areas inspected.

I was so tired yesterday I forgot to thank Pierre for all his assistance. He is a wonderful host and we had a great visit. It is especially good for me because he actually does the driving when he accompanies us. That is a welcomed break as anyone knows who has driven in Israel before.

Our peace we give to you.

Brian, Rick, Moe, and Ben

Thursday February 27, 2014

Hi Folks,

We hope you are all well. We are looking forward to some sleep tonight. Today we traveled to our traditionally early sites in the western Negev. No surprises so far. The volunteer barley is very young. It is now firmly in second place as to the youngest of any inspection outside of the barley found in 2005. The most advanced stalks were just out of the boot in the flowering stage. Even the roadside barley was in that stage as well with much of it still in the boot (looking like grass). Of course you all know we don't use such but it illustrates how young the crop is in the traditionally early areas. Many of the wild oats are still just emerging from the boot as well and the

pattern over the years has proven they are usually 3-4 weeks earlier than the wild/volunteer barley. It is a witness to pre-aviv stages. Also the red anemones of the south are in full bloom in some areas and in some fading. This is another pre-aviv sign when dealing with the lower elevations of the Negev.

The manipulated domestic wheat and barley are in many cases in the head with little kernel development inside.

The grapes are in most cases very dormant with a few locations of designer grapes starting to bud. Of course we do not use them as a witness. Of the 20 or so Fig trees looked at in Shoresh only 2 show any bud activity.

We saw a lot of sheep and goats today but only a handful of lambs. Most ewes we either barren, pregnant, or in some cases showed signs of just having dropped their lambs. That makes them too young to accompany the mom out for feeding.

Tomorrow we will be inspecting the areas in the north. It has been much drier there of late so it will be interesting to see if it confirms the findings in the Negev.

February 25, 2014

Hi Folks,

We hope you are all doing well. We will be in Israel this week for our annual inspections at the end of the 12th lunar biblical month. We will be looking for the maturity stage of the volunteer/wild barley fields located all over the country. By fields I means agricultural fields and not rocky, stony, hillsides. The barley found there we refer to as goat grass as most of you are aware of. We will also be looking for the age of the new lambs, the migrating storks in the rift (Jordan) Valley, the grapes in the bud, figs budding, and a number of other biblical witnesses to the beginning of the year.

We will send out reports Thursday, Friday, and Sunday. There are fields in the south (Negev) which are home to manipulated/domestic varieties of grains which are well into the head. If we get time we will address this as we have in many years in the past as to the reason we do not use them in our list of agricultural witnesses during our inspections.

Some are asking about the timing of the minimal acceptable stage for use as a wave sheaf offering during the days of Unleavened Bread. This keeps coming up each year because there are some who report on the barley who insist that it needs to be at this stage Lev. 2 (ability to be parged and roasted to be ground into flour) at the end of the 12th month. There is no such biblical command to be found in scripture. This stage needs to be achieved by the date of the first cutting of barley for the wave sheaf which would be at its earliest the 15th day of the 1st month (abib). That all depends on what day of the week the start of the month begins. That could be as much as the 21st day of Abib. For instance for this year if the new moon is seen after sunset Sunday March 2nd and the month starts on the 3rd of March you would have until March 23rd to meet the biblical standard. We have addressed this in length in the past reports for it is a recurring question based on misinformation. The wavesheaf is representative of our Messiah being accepted on our behalf as Lev 23 clearly instructs us when applied to the Creators plan of salvation. Unfortunately all do not share that belief, but in a time to come all will know it.
